

## **Design draftsman (male/female)**

Field of study: heating, ventilation and air conditioning technology

Qualification: German secondary education certificate

Duration of training: 3½ years

### **Overview of training course**

You will complete your draughtsman training as a dual system - in the company and at vocational college.

You will learn the basic principles of technical drawing in the company where you are a trainee while you study business organization and communication at vocational college, along with other subjects.

The basic principles of technical drawing include: technical calculations, how to draft and read technical drawings, plans, diagrams and documents, and computer-aided design (CAD).

Through practical internships on construction sites during the training course, you will gain insight into the exact specifications of ventilation and air conditioning systems.

You will accompany assembly technicians on major construction sites for long periods of time (job shadowing) to learn about large projects, for example in the pharmaceutical industry or medical technology.

### **The typical job description**

Once you have completed your training, you will draw up plans and technical documents according to project managers' specifications.

Moreover, you will prepare technical drawings for heat or air supply facilities, for example.

### **Training facilities**

Company

Vocational college

Training workshop

### **Does this sound like you?**

If so, please send your complete written application to the address shown below. Should you have any queries, please contact us for further information.
